Great White Egret

The Wetlands Education Center occupies 3.5 acres between the UTMSI Marine Science Education Center and the South Jetty. It is a marsh/seagrass pond, landscaped and planted with various seagrasses and appropriate coastal vegetation, nourished by water from the adjacent ship channel. The public is invited to stroll the surrounding boardwalk to observe migratory waterfowl and resident marsh birds. Weekly guided tours.

The jetty extends for several hundred yards into the Gulf and furnishes an excellent vantage point for observing a variety of open water species. Gulls and terns often rest at the base of the jetty, and shorebirds are usually feeding along the beach. Brown and white pelicans can be seen gliding over the Gulf year round.

Paradise Pond is Mustang Island’s only seasonal freshwater wetland and pond. The natural setting on two acres is surrounded by giant Black Willows and native coastal prairie. The board-walk leads into an oasis that can be filled with songbirds and more than 100 species of neotropical migrants on busy days.

The popular boardwalk extends into a marsh associated with the adjoining wastewater treatment plant. Little water is available for much of the year on barrier islands such as Mustang, and the ponds here offer a consistent supply of water for a variety of wetland species. Walk along the boardwalk and from the observation tower look for Cinnamon Teal, Black-bellied Whistling Duck, Least Bittern, herons, egrets, cormorants and Roseate Spoonbills. The boardwalk and parking area are planted with native species, so be alert for hummingbirds, warblers and other songbirds during migration. Keep your eyes open for the resident American Alligators “Boots” and “Bags”!

Annual Whooping Crane Festival celebrated last weekend in February. Visit www.wtcf.org

Located in the central flyway, Port Aransas and Mustang Island boast hundreds of permanent residents and thousands of migrants that consider this the perfect rest stop. Texas is the number one birding state and Port Aransas is a must-stop destination for avid birders. Our island offers dozens of perfect vantage points to view birds—wetlands, nets, jetties, piers, boats, and 19 miles of beaches and dunes. Boardwalks and observation towers offer easy access to wetlands and vegetation pockets specially designed to attract birds.

There are also distinguished birding events throughout the year that you won’t want to miss. The Whooping Crane Festival, held the last weekend in February, is a special event featuring world renowned speakers, exhibits, bus and boat tours, workshops and field trips. Spring and fall migration are amazing times to visit Port Aransas. With five sites on the Great Texas Birding Trail, regardless of the time of year, you’ll find Port Aransas and Mustang Island as relaxing a rest stop as the birds do.

Guided tours take place every Wednesday at 9:00am. Free viewing scopes.

Port Aransas Wetlands Park

Port Aransas Nature Preserve

The Nature Preserve is a 1,200-acre site composed of upland trails, elevated boardwalks, viewing towers, covered pavilion and picnic areas. This natural area’s extensive tidal flats provide feeding areas and important habitat for shorebirds and endangered and threatened species. The Snowy Plover Wilson’s Plover and Horned Larks nest on the flats. There are two entrances: one at the end of Port St. and one on Highway 361 near the airport.
